

The new conference series will be launched in a joint effort by RIXC/Renewable Network and Ars Baltica, with contribution by a conference steering committee consisting of other involved partners – individuals, organizations, art institutions and networks. More than just building another new Baltic-Nordic collaboration platform, this event aims to play a role of ‘connector’ – maintaining links between different platforms and networks existing in North European and Baltic Sea region, as well as connecting them with the other European countries and the rest of the world.
